STARTING A TEST

	Remote Buttons	Menu Options
1. Press the MENU button.	MENU ≡	
2. Select the **System Setup** option.	mno 6	
3. Select the **Diagnostics** option.	def 3	

TELEPHONE CONNECTION TEST

This test checks that the receiver telephone connection is correct. Select the **Connection** option to begin the test. The receiver displays a message asking you to wait until the test is done.

• If the telephone connection is correct, the receiver displays a **Phone Connection OK** message.

• Select the **Dial Out** option so the receiver can make a toll-free call to the Customer Service Center. Press the SELECT button to start the call. When the call is done, select the **Cancel** option to exit the test menu.

• If the telephone line is not connected properly, the receiver displays a failure message. Check the telephone connection and then repeat the test.

Note: If you have the receiver connected to a DSL (Digital Subscriber Line) phone line, it may cause this test to fail. If so, you will need to install a DSL filter between the receiver and the phone jack on the wall. You can get a DSL filter from your Internet Service Provider or a local electronics parts store.
